### RECOMMENDATION—

**Approval.**

### BACKGROUND—

The Leetown Creekway (fka 7<sup>th</sup> Ward Ditch) Flood control Study of 1993, recommended the wooden storm box sewer serving the Leetown Creekway Watershed be replaced to prevent structural failure and improve the capacity. The size of the project and the limited funding available required this project be built in phases. The phases are as follows:

Phase 1	East 30 <sup>th</sup> Street & University Avenue to Garfield Avenue
Phase 2	Garfield Avenue to Cleveland Avenue
Phase 3	Cleveland Avenue to East 27 <sup>th</sup> Court
Phase 4	East 27 <sup>th</sup> Court to Easton Boulevard

The design of Phase 1 was completed in 1998, construction began on Phase 1 in 1999. Design of Phase 2 begun in early 2000, construction began in 2001. Construction of Phase 2 is completed.

During the design of Phase 1 some of the preliminary design was completed on the remainder of the storm sewer box replacement (Phase 2, 3 & 4). This work provided information on the alignment of the future phases of the sewer and allowed property owners to have preliminary information on the impact of the entire project would have on properties in the neighborhood.

In previous council communications for Phase 2 design phase services (Roll Call No. 99-3761, December 20, 1999) it was indicated that future engineering services agreements were anticipated to provide for final design, public meeting and Right-of-Way services of Phases 3 & 4.
