EXHIBITS F-V

When we work with windows there are many factors to look for. For residential you want at least a DP 30 (Design Pressure). The window is tested with wind and rain to come up with the number.

The U Value is a measure of the total heat flow through the heat barrier from room air to outside air. This Value wants to be a very low number.

The R Value is the resistance a material has to heat flow. The higher the R Value the better the glass & units.

Mr. James Conlin Conlin Properties, Inc. 500 Griffin Building 319 - 7th Street Des Moines, Iowa 50309

> Re: Apartment Building 826 18th Street, Des Moines, Iowa

Dear Mr. Conlin:

From our discussion yesterday, it is our understanding that you intend to replace windows in the apartment building at the above-described address. This property is located in the Sherman Hills Historic District for which there are covenants that apply to the properties within the district.

We have briefly perused the covenants and are of the mind that, due to previous renovations completed over the past 100+ years of the existence of the property at 826 18th Street, the improvements do not exhibit the characteristics desired by the historical district designation. This is evidenced by the several post-construction additions and the metal siding.

The non-conforming modifications that have occurred in the past to this and other properties have been "grandfathered" in beyond the establishment of the historical district designation and preceded the restrictive covenants now in existence.

According to our conversation, it appears the opinion of the neighbors within the district is that the proposed vinyl windows would not conform to the requirements of the covenants. In fact, it is their allegation that the addition of the vinyl windows would have a blighting influence on neighboring property values as a result of their installation.

It is not our intent to comment whether the windows are conforming or not. Rather, you have asked that we provide an opinion as to whether the installation of vinyl windows at this property would have an effect on value of the surrounding properties.

In light of the fact that the Sherman Hills Historical District has numerous properties that do not also conform to the current restrictive covenants, the neighborhood is far from being a

Mr. James Conlin April 5, 2012May 7, 2012 Page 2

cohesive, uniform development. While well-meaning, the restrictive covenants may simply not apply to all situations.

In this case, the subject has metal siding, non-conforming additions, and is otherwise not in conformance with the restrictive covenants. Any "blighting" influence on surrounding property values has occurred years ago. Therefore, as long as the windows blend well with the current color scheme of the subject building, and do not present an obvious change to the structure, they will not cause an additional blighting influence on the values of surrounding properties.

As currently configured with metal siding and porch additions that have occurred over the years, the subject property does not appear to have any significant historical value. Any attempts to reclaim historical significance through complete renovation, including removal of the metal siding, replacing damaged or rotting original siding, removing the non-conforming porches and reconstructing the exterior to original design, would certainly NOT be economically feasible. The cost to complete these tasks, following all of the rules involved with such a task, would far exceed the resulting market value of the property.

In contrast, replacing the existing rotting windows with energy-efficient, structurally sound windows will result in lower energy costs to the owner and, thus, an increased value overall.

Thank you for the opportunity to provide this service to you.

Murillo Flats

From Wikipedia, the free encyclopedia

Murillo Flats is a three story, formerly seven unit brick apartment building in Des Moines, Iowa. Built in 1903, it was originally located at 531-533 14th at the intersection with High Street in the downtown area of the city. On March 1, 2008, in the largest relocation project scheduled for that year and an event covered by both local & national media, the 705-ton building was moved to a new location so that it could be preserved. It was listed on the National Register of Historic Places in 2009.

for several years to sell condominiums prior to the building being purchased by Wellmark Blue Cross & Blue Shield.^{[2][3]}

Move to 16th & High Street [edit]

Background [edit]

On September 15, 2007 Wellmark Blue Cross & Blue Shield announced plans to build a new company headquarters on three city blocks (6.5 acres) in downtown Des Moines. The land purchased by Wellmark contained several existing buildings, including a row home built in 1880 and the Murillo Building. These two were identified for preservation, and Wellmark indicated that

they would give away the buildings on the condition that they were moved from the site by March 2008. Rob McCammon worked on the plan to relocate the buildings, with Phil Kaser agreeing to finance the Murillo Building move. Wellmark gave Kaser the building, along with a portion of the money saved from not having to demolish it. Kinter Construction was hired as the general contractor for both moves, who in turn brought in Patterson Structural Movers of Washington, lowa to work on the Murillo. [3][4][5]

Preparations [edit]

Preparations for the move took 17 days. The building was cut from its foundation using water-lubricated chain saws, then raised using hydraulic equipment before finally being placed upon dollies with a total of 192 wheels, each of which was individually powered and could be turned 90 degrees in order to move a different direction without having to turn the entire building. Power lines were also moved along the planned route to accommodate the building's size. [3][5][6][7]

The Move [edit]

The building was to move three blocks along High Street to its new location. Due to concerns that the weight of the building may damage sewer pipes running under the street, Des Moines city officials wanted the relocation to occur during daylight hours on a Saturday. March 1 was the last day that the move could take place, otherwise Wellmark would have demolished the building. The relocation effort began just after dawn, but due to warming temperatures and melting snow the building could not initially be moved as the wheels stuck in the mud. The building eventually rolled onto High Street with the aid of two heavy-duty tow trucks from Hanifen Towing in Des Moines, but this part of the operation took more than four hours instead of the expected one. By Saturday evening the building was located on the street next to its final destination, and on March 2 was positioned over a hole dug in the lot where the new foundations will be built. The entire event was recorded on 9 cameras by Windfall Films for their Monster Moves show, which is broadcast in the United States on the Discovery Channel and National Geographic Channel (under the names Mega Moves & Impossible Moves). The Murillo move features in episode 5 of the third season ("Historic Hulks") [3][8][9][10][11] It is currently being shown on "Massive Moves" on the DIY network. [1] [3]

Future [edit]

Phil Kaser indicated that he intends to rent the apartments once the move has been completed, and possibly sell them as condominiums in the future.^[3]
